

Stavroula Sofou is Associate Professor in the Departments of Chemical and Biochemical Engineering, and Biomedical Engineering at Rutgers University, and member of the Rutgers Cancer Institute of New Jersey. She received her Diploma in Chemical Engineering from the National Technical University of Athens, Greece, and her Ph.D. degree in Chemical Engineering from Columbia University. She was a postdoctoral research fellow at Memorial Sloan-Kettering Cancer Center in Medical Physics/Experimental Pharmaceutics. Her research interests range from biophysics of heterogeneous lipid membranes, to engineering of environmentally-responsive hierarchical lipid assemblies with tunable functionalities, to nanoparticle-mediated delivery of chemotherapeutics and alpha-particle emitters with a twist in targeting and transport. Her research is supported by the National Science Foundation, and she was awarded the American Cancer Society's Research Scholar Grant, among other distinctions. She is currently the Chancellor's Scholar at Rutgers, Fellow of the Greek Diaspora Program, and Section Editor of the Journal of Membrane Biology.
